Personal Assistance for Seniors Who Are Self-Reliant - Project Report

1. Introduction

1.1. Project Overview

- An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB.
- If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform.
- The device will receive the medicine name and notify the user with voice commands.

1.2. Purpose

- Sometimes elderly people forget to take their medicine at the correct time.
- They also forget which medicine He / She should take at that particular time.
- And it is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed.

2. Literature survey

2.1. Existing problem

Elderly people let slip the medications at the correct time and the existing solutions for this problem is setting reminders or using pill boxes, calendars, Personal Assistance. Though the solutions give reminders, the voice commands or assistance given by this system is more efficient.

2.2. References

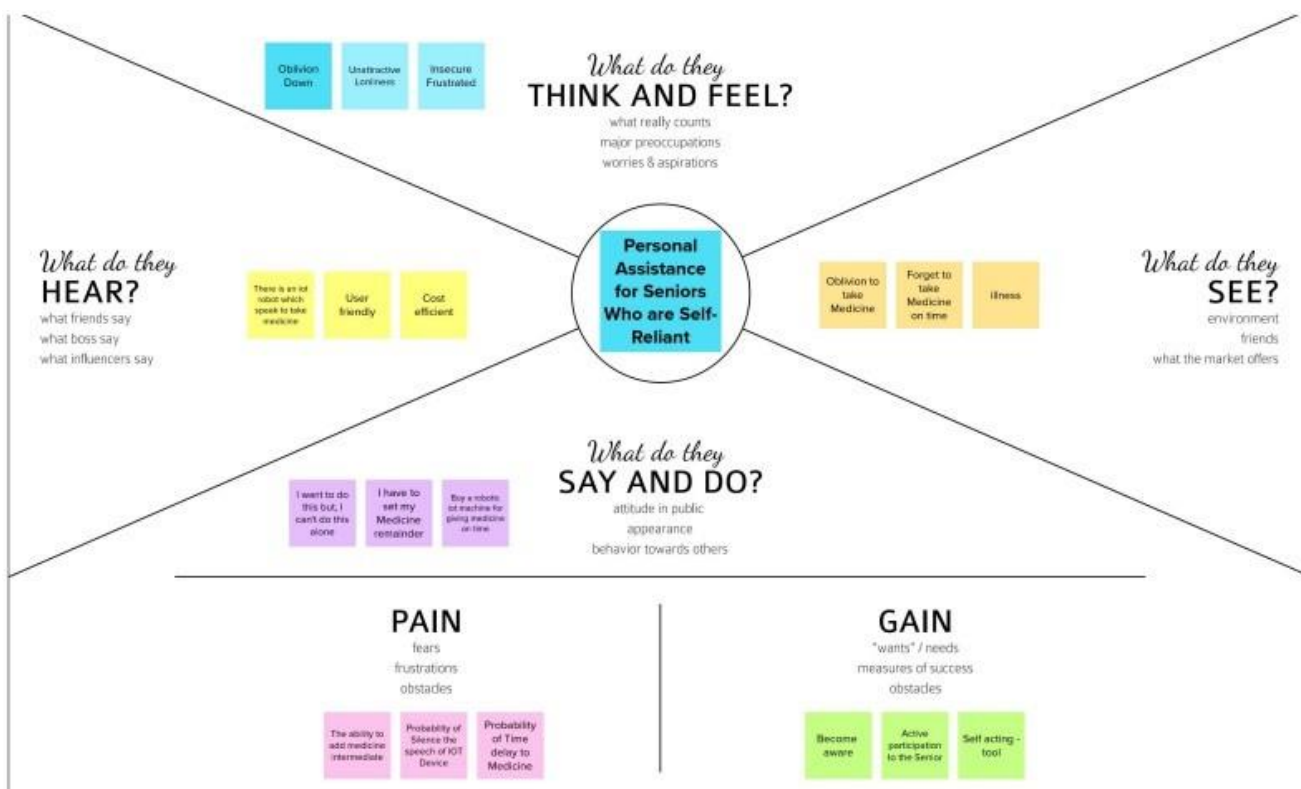

- 1) Visual Health Reminder: A Reminder for Medication Intake and Measuring Blood Pressure to Support Elderly People ; René Baranyi; Sascha Rainer; Stefan Schlossarek; Nadja Lederer; Thomas Grechenig
- 2) Cloud Computing based Medical Assistance & Pill Reminder ; A. Chinnasamy; Ram Prasad J; Syed Rafeeq Ahmed; Akash S

2.3. Problem statement definition

Skipping medicines can be serious for some medical health conditions; Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine one should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock.

3. Ideation and proposed solution

3.1. Empathy Map Canvas

3.2. Ideation and Brainstorming

3.3. Proposed solution

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine should be taken at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock.
2.	Idea / Solution description	<ul style="list-style-type: none"> ► A medicine reminder system is developed. An app is built for the user (caretaker) which enables him to set the desired time and medicine. ► These details will be stored in the IBM Cloudant DB. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform.

		➤ The device will receive the medicine name and notify the user with voice commands.
3.	Novelty / Uniqueness	➤ Keeping track of the medicines taken by the user at each time interval. ➤ Information is stored in the secured IBM cloud.
4.	Social Impact / Customer Satisfaction	The reminder system enables the user to take tablets at regular intervals prescribed by the physicians.
5.	Business Model (Revenue Model)	Direct Mode: We gain revenue from selling the medical reminder system to hospitals, medical health centres and even in old age homes. Indirect Mode: We gain profit by having partnership with pharmaceutical companies.
6.	Scalability of the Solution	The medical alert system can be used in hospitals, medical health centres and even in old age homes for dispensing medicines.

3.4. Problem Solution fit

Define CS, fit into CC Focus on J&P, fit into BE, understand RC	1. CUSTOMER SEGMENT(S) CS Our customers are people who require medical support; Also, our alert system can be used in hospitals and old age homes where people will require medical assistance.	6. CUSTOMER CONSTRAINTS CC Healthcare costs, lack of financial support, Difficulty with everyday tasks and mobility, Finding the right care provision and seclusion.	5. AVAILABLE SOLUTIONS AS The existing solutions for this project is setting reminders or using pill boxes, calendar, Personal Assistance. Though, the solutions give reminders, the voice commands or assistance given by this system is more efficient.	Explore AS, differentiate Focus on J&P, fit into BE, understand RC
	2. JOBS-TO-BE-DONE / PROBLEM J&P Skipping of medicines can be serious for some medical health conditions; in such cases this system would help the individual to take their medication on time.	9. PROBLEM ROOT CAUSE RC Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine one should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed.	7. BEHAVIOUR BE Directly related: To download the web application so that the user can receive voice notifications on the connected IoT device. Through this application, the user can set the details of the medicine name and other details. Indirectly associated: Customers can be carefree and don't need a person round the clock to check on them.	
Identify strong TR and EM	3. TRIGGERS TR There are applications which already exist that give regular reminders to take medicines.	10. YOUR SOLUTION SL An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform. The device will receive the medicine name and notify the user with voice commands.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE The customers should have the mobile application on their devices so that they can get regular voice commands. 8.2 OFFLINE The customer should have the device or mobile near them. Also, the customer should update the schedule.	Identify strong TR and EM
	4. EMOTIONS: BEFORE / AFTER EM With this application built, which gives voice commands and alerting system which is more efficient in helping the elderly to take their medicines on time and can be carefree.			

4. Requirement analysis

4.1. Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Access Cloud services	Accessing the cloud service with correct credentials. Storing the details in the cloud database.
FR-4	IOT configuration	Fine Tuning the IOT device based Cloud DB access via device. Manage the data request and response effectively

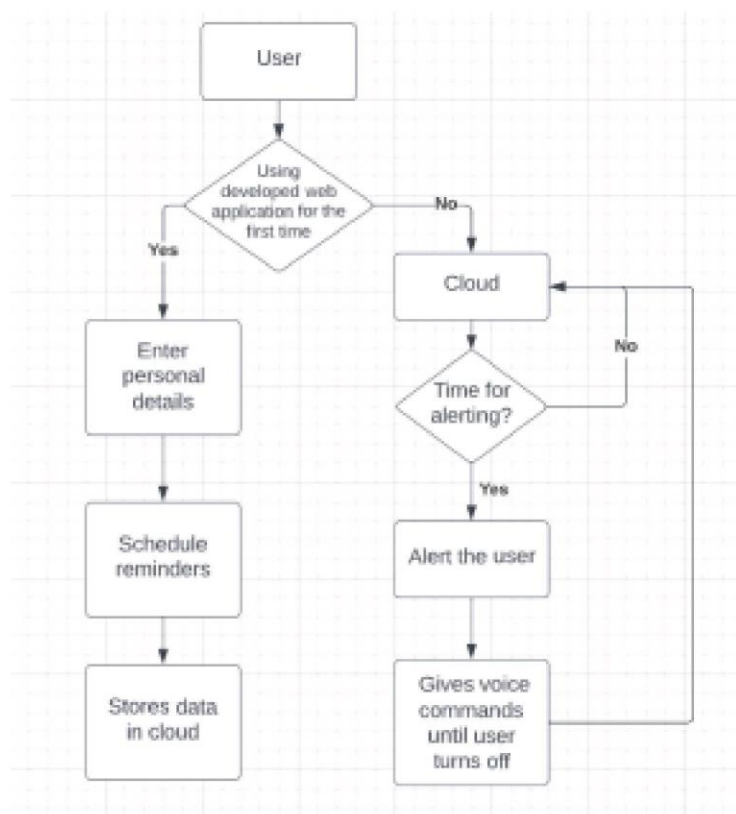

4.2. Non-functional Requirements:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	App can be used by anyone who has knowledge about applications and computers.
NFR-2	Security	For security, TFA is enabled and biometrics are also added for user safety.
NFR-3	Reliability	Highly reliable since, It uses trusted and authentic cloud services like IBM

NFR-4	Performance	Performance is better compared to other marketproducts.
NFR-5	Availability	Available on mobile app.
NFR-6	Scalability	Using Cloud services, makes the scalability higher the using traditional locally stored database.

5. Project Design

5.1. Data Flow Diagrams

5.2. Technical architecture

5.3 User stories

User Type	Functional Requirement(Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Senior citizen)	Caretaker	USN-1	As a user, I want to take Medicines on time and monitor my health	I want to Take Medicines On time	High	Sprint-1
Customer (Alzheimer patient)	Smart medicine box	USN-2	As a user, I want to take my tablets on time by voice command	I want to take my tablets on time by voice command	High	Sprint-1
Customer (Mentally ill patient)	Caretaker	USN-3	As a user, my patient needs to take medicines on time and monitoring the activity	My patient needs to take medicines on time	Medium	Sprint-2
Customer (Coma patient)	Caretaker	USN-4	As a user, my patient medication time and prescription should load in database for upcoming week	My patient medication time and prescription should be in database list	Low	Sprint-4
Customer (Disabled people's)	Smart medicine box	USN-5	As a user, I need to take my medicine in nearby places with light notification	I need to take my medicine in nearby places with light notification	Medium	Sprint-3

6. project planning and scheduling

6.1. sprint planning and estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Customer Registration	USN-1	As a user, I can register for the application by entering my email,password, and confirming my password.	3	High	Anandharaj A
Sprint 2	Set Alarm	USN-3	As a user, I can set an alarm to alerting a medicine through medicine remainder system	10	High	Balavigneshwaran M
Sprint 2		USN-4	As a user, I can Activateand Deactivate the alarm	10	High	Balavigneshwaran M
Sprint 3	Notification	USN-5	As a user once I can the setthe alarm then I gets the notification	10	High	Prasiya A B
Sprint 3		USN-6	As a user, If I requires this system then a notification will be sent into his device.	10	High	Prasiya A B
Sprint 4	Medication Detail	USN-7	As a user, I have multiple medications each day, I can put each pill in the boxfor the corresponding day.	10	High	Sornalatha S
Sprint 4		USN-8	As a user, between settingan alarm and using a pillbox, I'll be able to stayon top of your medications and not missa dose.	5	low	Balavigneshwaran M
Sprint 4		USN-9	As a user, I can store the name of the medicine withits description	10	High	Balavigneshwaran M

6.2 sprint delivery schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

6.3 Reports from JIRA

The screenshot displays the Jira Software interface for a project named "Personal Assistant For Seniors Who Are Self Reliant". The main view is the "Backlog", which shows a list of issues organized into sprints. The current sprint is "PAFSWASR Sprint 2", which has 3 issues. The issues are:

- PAFSWASR-16: As a user, I will receive confirmation email once I have registered for the application. (AUTHORIZATION) - 2 points, TO DO.
- PAFSWASR-17: As a user, I can set an alarm to alerting a medicine through medicine remainder system. (SET ALARM) - 10 points, TO DO.
- PAFSWASR-18: As a user, I can Activate and Deactivate the alarm. (SET ALARM) - 10 points, TO DO.

Below Sprint 2, there is a section for "PAFSWASR Sprint 3" with 2 issues:

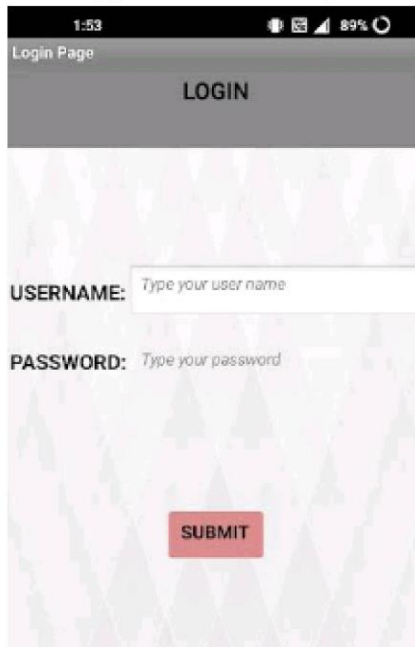

- PAFSWASR-19: As a user once I can set the alarm then I gets the notification. (NOTIFICATION) - 10 points, TO DO.
- PAFSWASR-20: As a user, If I requires this system then a notification will be sent into his device. (NOTIFICATION) - 10 points, TO DO.

The interface includes a sidebar on the left with navigation options: Roadmap, Backlog (selected), Board, and Code. The top navigation bar shows the project name, search, and user profile. The bottom status bar indicates the user is in a team-managed project and shows the system time as 21:09 on 22-11-2022.

7. Coding and Solutioning

7.1 Feature 1

The mobile application developed has a feature of individual login by different users.

The screenshot shows a mobile application interface for a login page. At the top, the status bar displays the time 1:53, signal strength, and battery level at 89%. The app's title bar is labeled "Login Page" and features a "LOGIN" button. The main content area has a light pink background with a subtle geometric pattern. It contains two input fields: "USERNAME:" with a placeholder "Type your user name" and "PASSWORD:" with a placeholder "Type your password". A red "SUBMIT" button is positioned below the password field.

7.2 Feature 2

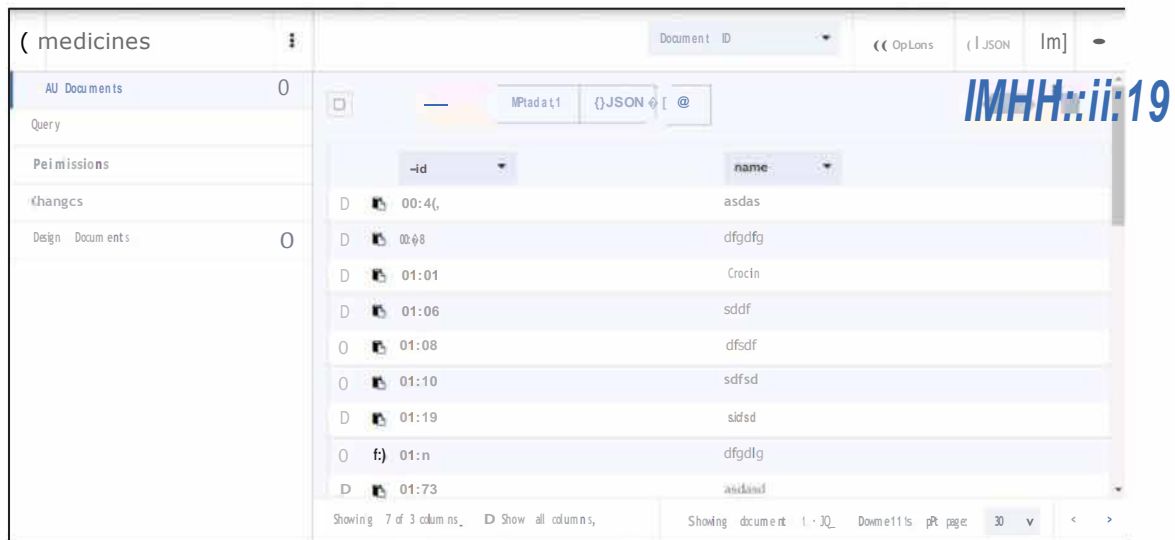

The mobile application also has the feature of uploading medicine names in the cloud.

The screenshot shows a mobile application interface for a "Medicine Details" page. The status bar at the top shows the time 2:00, signal strength, and battery level at 88%. The app's title bar is labeled "Medicine Details". The main content area is white and displays a "Welcome!!!" message. Below this, a prompt reads "Please enter the medicine name and time below". There are two input fields: "Medicine Name:" with the text "Crocin" and "Medicine Time:" with the text "14:01". A green "SUBMIT" button is located below the time field. Below the button, the text "Updated Successfully" is displayed. At the bottom, there is a grey "Logout" button.

7.3. Feature 3

The project includes a cloud database system.

8. Testing

8.1. Test cases

Test case	Precondition	Test steps	Test data	Expected result
Verify login with valid credentials	User should have a network connection	1. Launch URL 2. Enter valid username. 3. Enter valid password. 4. Click on the "Login" button.	Username: RAJ Password: 12345	Users should be able to login successfully.
Verify login with invalid credentials	User should have a network connection	1. Launch URL 2. Enter valid username. 3. Enter invalid password. 4. Click on the "Login" button.	Username: RAJ Password: login. RAJ1 23	Users should not be able to login.
Update the medicine name with the time.	User should have a network connection	1. Enter valid medicine name. 2. Enter the time when the medicine has to be consumed. 3. Click on the "Submit" button.	Medicine Name: Cetirizine Medicine Time: 20.00	Users should be able to update it successfully.

8.2. User acceptance testing

Login page testing

9. Results

9.1. Performance Metrics

S. NO	Parameter	Performance
1.	Response Time	0.2s (Average of 10 trials)
2.	Workload	500 users (Calculated based on Cloud Space)
3.	Revenue	Individual users and pharmaceutical industries.
4.	Efficiency	Simple and straightforward workflow, which makes the process efficient.
5.	Down Time	Almost no down time due to IBM Cloud enabled solution.

10. Advantages and Disadvantages

Advantages

- Help the elderly people to take their medicine at the correct time.
- Avoid personal assistants or caretakers needed for medically sick people.
- Cost efficient.
- Can store multiple data and many notifications can be generated.
- Since it includes voice assistance, even blind people can use our device.

Disadvantages

- Makes people lethargic and makes them dependent always on others.
- Requires a stable internet connection.

11. Conclusion

The project offers the elderly or medically sick people a personal assistant which reminds them of the medicines to be consumed at the particular time. Skipping tablets may lead to serious problems if the person has a severe illness and this can be avoided. Since the cloud is integrated with the mobile application, numerous data can be fed into the database and notifications can be generated. The mobile application developed is highly customisable by the user and easy to use.

12. Future Scope

The project can be further developed by bringing into the feature of informing the medicine name during the notification. The voice assistance which is given can be customized by adding the user's voice or the caretaker's voice. Further the mobile application can update medicines by taking voice commands as an input from the user.
